

Broadband over Power Lines should not be passed. This will cause havoc with Amateur Radio Operator throughout the United States by wiping them out on the HF bands where they have always operated to assist in national emergencies by providing backup communications for various emergencies for Red Cross, Emergency Operation Centers set up by states, etc. Passage of a bill like this would be the ruination of Amateur Radio. What is next if this bill is passed. The government wants to keep taking away from the US citizen and giving nothing in return. I am strictly against the passage of Broadband over Power Lines.
